

Who is Pryme?

A game-changer in plastic recycling

Globally, less than 20% of produced plastics currently gets recycled. As an innovative cleantech company with efficient and scalable recycling technology, Pryme provides a meaningful solution to the plastic waste problem.

Our first processing plant is under construction in the port of Rotterdam and will become operational in 2022. This will be followed by an ambitious rollout of our technology across Europe and around the world, in collaboration with strategic partners.

Our vision

We are an innovative cleantech company focused on converting plastic waste into valuable products through low-carbon chemical recycling on an industrial scale.

Our organisation is guided by a set of values that define our professional goals as well as the way we choose to do business and the role aim to play in improving the environment.

Our mission

We provide a fast, sustainable and scalable solution to waste plastics by converting PP and PE plastics into reusable feedstock. In short, we're making plastics circular.

We're on a mission to innovate within the waste plastics treatment cycle and help realise a zero-carbon, zero-waste solution. We take a pragmatic and intelligent approach to pioneering waste solutions, seeking out ambitious companies to partner with and refine waste and recycling methods around the world.
